

Matching current-task exposure narrows the apparent replay benefit

Expert adapters → Agent-Dice merge → rank-8 compression → 128 workflow updates

All three start from identical compact factors: 3,670,016 adapter bytes; no dense offset. One calendar stream.

Control and replay use the same current rows and current-loss coefficient. Batch size and optimizer interactions differ.

Fixed final checkpoints; whole JSON answers, execution result and native EOS independently checked after reloading.
